

SOT STONE

WON'DROUS ITEM, UNCOMMON

You can put this stone in a liquid as an action, causing it to absorb that liquid at a rate of 12 gallons per minute. The stone can hold up to 36 gallons of liquid. As long as the stone holds any amount of liquid, you can use your action to squeeze the stone, causing the liquid to pour from the stone at a rate of 2 gallons per minute. If the stone absorbs a liquid while it already contains a liquid of a different type, the liquids remain separate within the stone. Only once the stone is squeezed do they mix.

If the stone contains at least 1 gallon of an alcoholic beverage, it starts rolling in a random direction if put on a flat surface.
